NAME

Glitchpad

State where the name came from and what its parts carry.

WRITTEN FORM

Write Glitchpad in title case in prose and lowercase in technical identifiers.

PARENT	ShruggieTech, shared typography and dark-first discipline, independent identity
REGISTER	precise-dry
FLOURISH	Declined
CASING	Title case in prose, lowercase in identifiers

Product principle

View your files.

PERSONALITY

TRAIT	EXPRESSION	AVOID
Direct	Uses plain labels and short sentences	Metaphor and suspense
Unobtrusive	Keeps controls compact and file content visually primary	Decorative or attention-seeking UI
Familiar	Uses predictable controls and layouts	Novel interaction for its own sake

PROMISES

- Common file formats open in one app across desktop and Android.
- Content, structure, and metadata use familiar navigation.
- Markdown, text, and source files can be edited where supported.

THE SHARP EDGE

File contents can be sensitive or malformed. Glitchpad reports what it can read and does not determine whether a file is safe.

Marks and lockups

The paper and G share one construction. The G is cut from the page. The sulfur corner makes Glitchpad easy to identify in app lists, tabs, and file association menus.

Clear space

One clear-space unit on every side: 70 units on the 800 × 1000 canvas, 9.7 percent of artwork width. No text, border, icon or crop enters that band.

MINIMUM SIZE

mark	40 px
horizontal	160 px
stacked	144 px
wordmark	120 px

Below 32 px the reduced master takes over. It ships as its own file. Do not rasterise the full mark down at runtime.

Fixed lockup proportions

LOCKUP	MARK HEIGHT	GAP	ALIGNMENT
Horizontal	160 units	34 units	Optical center
Stacked	1.80C	0.45C	Centered on wordmark ink width

The horizontal row records its approved master composition. C is the outlined wordmark cap height used by the stacked lockup. X is the clear-space unit declared above. Keep one X clear around every master and never resize the mark and wordmark independently.

PROHIBITED

No rotation, skew, stretch, outline, bevel or glow. Never recolour individual elements. Never set the wordmark in live text or a substitute typeface. Never combine the glitchpad and ShruggieTech marks into one lockup.

COLOUR

Palette

Near-black surfaces keep controls visually secondary to file content. Sulfur gold makes Glitchpad easy to find and marks selected items, active views, and keyboard focus.

background
#F8F8F6

muted
#F5F5F5

muted-foreground
#6B6B6B

LIGHT SURFACES

The bright accent #FFD900 measures **1.3:1** on the light reading surface and is never text there. The light token block substitutes #867100 at 4.51:1 automatically. The legal foreground on an accent fill is #000000 at 15.18:1. Every fill token in brand.json carries its measured foreground.

SEMANTIC USE

COLOUR	MEANS
Accent	Primary value, selection, links, focus
Orange	Needs attention, threshold exceeded
Fault	Failed or timed out. Always with text.

COLOUR VISION

The emphasis orange and the failure red sit close in hue and are not reliably separable under deuteranopia. That is acceptable only because state is never carried by colour alone: every state ships a written label.

Chart colors

Chart colors serve data visualization. Brand applications use the identity accent and the neutral surfaces. Each chart color is derived from the identity accent and measured against its surface so every entry clears 4.5:1.

CONTRAST CHECKS

Lightness is calculated separately for dark and light surfaces. Chart hues stay at least 47 degrees from the warning orange and 67 from the failure red, and no two entries sit closer than 55 degrees.

THE SAME PALETTE ON THE LIGHT READING SURFACE

DERIVED VALUES

SERIES	DARK	LIGHT
chart-1	#9D8500	#867100
chart-2	#D55C1A	#A45C3C
chart-3	#1DA046	#3F7F4B
chart-4	#CE5390	#A05778
chart-5	#00999F	#007F85

RULES OF USE

Series order is fixed: chart-1 is always the primary measurement. Never reorder to make a chart look better. Never introduce a sixth colour; past five series, switch to a form that does not depend on hue. A series never uses the emphasis orange or the failure red, because those carry state.

Display, interface, data

Glitchpad uses three type families. Space Grotesk handles display text, Geist handles interface and reading text, and Geist Mono handles identifiers, offsets, and data.

KEY READABILITY TEST

00 1lI 8B 5S 2Z {{ }} [] ()

ROLES

FUNCTION	TYPEFACE	WEIGHTS
Display, headings	Space Grotesk	500, 700
Body, interface	Geist	400, 500
Telemetry, code	Geist Mono	400

GEOMETRY

AXIS	VALUE
Radii	6 / 8 / 12 / 16 / pill
Spacing	4 8 12 16 24 32 48 64 96 120
Focus	2px ring at 2px offset

AVAILABLE WEIGHTS

Geist ships 400 and 500. Geist Mono ships 400 only. Space Grotesk ships 500 and 700. Any other weight makes the renderer synthesise a faux bold, which prints badly and forces outlined glyphs into exported PDFs. In mono, carry emphasis with colour.

SCALE, DISPLAY

TOKEN	SIZE	TRACKING
display-xl	72	-0.030em
display-lg	56	-0.025em
display-md	40	-0.020em
display-sm	28	-0.015em
display-xs	20	-0.010em

SCALE, READING

TOKEN	SIZE	LEADING
body-lg	18.4	1.6
body-md	16	1.7
body-sm	14	1.6
body-xs	12	1.5
eyebrow	12	0.12em caps

A ShruggieTech project

Glitchpad uses the ShruggieTech type families, dark product surfaces, and the inherited orange warning color **#FF5300**. The mark geometry and the identity accent are this sub-brand's own and are never borrowed by a sibling. The identity accent sits 56.8 degrees from its nearest sibling.

A SHRUGGIETECH PROJECT

Geist Mono, uppercase, positive tracking. Visually subordinate and outside the logo clear space. Never a combined parent-product lockup.

Load the system

```
npx shadcn@latest registry add @glitchpad=https://brand.shruggie.tech/glitchpad/brand/r/{name}.json
npx shadcn@latest add @glitchpad/theme @glitchpad/fonts
npm i geist next-themes
```

What ships in the kit
